## Matlab function output not in workspace

Commented: sun on 9 Jul 2020 I run the programme, it ends without any problem. Also with whos command i can see the variables in command window. But workspace doesnt show anything. Also after finishing the run process, i write the variable to the command window but it says undefined variable. Do you know what is the problem? I need to see the variables content from workspace. thank u but when I run this function only x is saveing as 'ans' When I run the following code, I cant access g1 and g2. How can I get g1 and g2 to be stored in the workspaceso that I can access it later?function g = helpme(x)g=0;syms f;for i=1:length(x) if length(x)-=1 g= cumsum(x); [c,index] = min(abs(g-sum(x)/2)); if i
